

BUSINESS CONTINUITY

SERVER BACKUP AS A SERVICE (BaaS)

Your private cloud bucket in the sky.

With digital transformation to multi-cloud ecosystems, dispersed workforces, and sophisticated cyberattacks, safeguarding your data has never been so critical. Atomic Data's Server (BaaS) solution serves as your private cloud bucket in the sky, allowing you to store backups offsite and recover your data, irrespective of location or workload type.

Modernize your data protection with Atomic Data's BaaS solution, powered by Veeam® Backup & Replication™. This robust solution will protect your cloud, SaaS, virtual, and physical workloads throughout each phase of their evolving life cycle.

- Fully managed by Atomic Data
- SOC 3 attested data center storage
- Highly scalable for larger environments
- Policy-driven protection
- Offsite backups to protect on-prem hardware
- Recovery & replication for critical workloads
- Reduced cost & complexity
- Encryption at rest

Enterprise-grade capabilities.

Veeam Backup & Replication reduces risk by storing three copies of data on two different media, with one copy being offsite — effectively helping you meet the **3-2-1 backup rule**.

Advanced ransomware protection for your data will bring you peace of mind. Veeam Backup & Replication conducts routine ransomware workload testing by restoring data in an isolated virtual sandbox and scanning for malware.

Encryption at rest adds an extra layer of security. Only authorized personnel can access sensitive data and decode it with an encryption key.

Needing an on-premises backup solution?

Back up your Windows® servers and cut recovery time with the Atomic Black Box hardware appliance.

- Backs up Windows® servers every hour
- Provides block and file-level backup
- Data de-duped and compressed
- Atomic Data monitored 24x7x365
- Hardware indifferent restorations
- Database verification and recovery testing
- Optional off-site data replication
- Optional standby virtual servers for failover
