Vendor Management Policy

Has your business fallen out of compliance? Maybe your security policies are in need of a tune-up. Or maybe you need to start from scratch and have no idea where to begin. Atomic Data offers Security Policy Advisory Services to get your company on the right track and stay secure.

Atomic Data's ISC® and ISACA® certified Security & Compliance team members, with deep knowledge of best-practice security policies and regulatory requirements, employ a four-step approach to advise organizations on their policies—**Analysis, Recommendations, Remediation, and Annual Review.**

ANALYSIS & RECOMMENDATIONS

Atomic Data Analysts can review all policy documentation that your organization currently has in place. Analysts can also conduct interviews with your key employees to help identify and document operational and regulatory requirements.

Analysts will then create recommendations based on the findings. Recommendations will include options for modifying existing security policies or creating new policies from scratch. They will also include Time and Materials estimates for remediation.

REMEDIATION

If you choose to move forward with the recommendations, Analysts will get to work on the remediation action plan. Completed policies, generally formatted to match your own document standards, are delivered to you for review and approval. Then, you can get down to implementing policies that will make your company safe and secure.

ANNUAL REVIEW

Security is an on-going battle. To ensure your company is maintaining best security practices, Atomic Data provides a review period as part of your Security Policy Advisory Services. Analysts will perform a short analysis and compliance check within a year of the original remediation. If your policies need a tune-up after, the process will begin again—revising and creating policies that best suit your needs.
