

IT SECURITY AS A SERVICE

POLICY ADVISORY & DEVELOPMENT

There's nothing quite like a crisis to shine a light on what's missing from your policy library. As COVID-related restrictions began, many businesses scrambled to create or update policies on BYOD, Remote Access, Telecommuting, Acceptable Use, and more. Instead of being frantic, be proactive with Atomic Data's Policy Advisory and Development services.

Atomic Data's Security & Compliance experts, with deep knowledge of best-practice security policies and regulatory requirements, employ a four-step approach to advise organizations on their policies—Analysis, Recommendations, Remediation, and Annual Review.

Common Security Policies

- Acceptable Use
- Asset Management
- Backup
- BYOD and Mobile Device
- Change Management
- Clean Desk
- Data Classification
- Data Destruction
- Data Retention
- Disaster Recovery
- Email
- Identity and Access Management
- Password Policy
- Patch Management
- Physical Security
- Remote Access
- Removable Media
- Security Incident Response
- Telecommuting
- Vendor Management

Analysis & Recommendations

Analysts review all policy documentation that your organization currently has in place. They'll also conduct interviews with your key employees to help identify and document operational and regulatory requirements.

Analysts will then create recommendations based on the findings. Recommendations will include options for modifying existing security policies or creating new policies from scratch. They will also include labor estimates for remediation steps.

Remediation

Next, Analysts will get to work on the remediation action plan. Completed policies, generally formatted to match your own document standards, are delivered to you for review and approval. Then, you can get down to implementing policies that will make your company safe and secure.

Annual Review

Security is an on-going battle. To ensure your company is maintaining best security practices, Atomic Data provides a review period as part of your Policy Advisory Services. Analysts will perform a short analysis and compliance check within a year of the original remediation. If your policies need a tune-up after, the process will begin again.
