

Atomic Data Cloud-based Disaster Recovery

Protect what matters most to your business

Your business innovation and growth thrives on digital transformation, but there's risk involved as you become increasingly technology dependent. With cybercrime escalating daily and emergencies seemingly lurking around every corner, protecting your business-critical data is essential if you want to survive.

Ransomware causes an average of

23 days of downtime¹

- Coveware

Are you prepared to tackle these top threats to your data?

Cyber attacks

Network failures

Power failures

Natural disasters

Technology breakdowns

You must create a business continuity plan, at the heart of which you need a reliable and trusted disaster recovery solution. Traditional, non-cloud based disaster recovery can be costly, requiring:

Operational management and monitoring

Capital investment in infrastructure

Ongoing testing and validation

Regular inventory to avoid gaps

Atomic Data Disaster Recovery as a Service (DRaaS) handles your DR infrastructure, eliminating capital investments while equipping your business to scale and recover quickly from any incident. Designed specifically for your VMware environment, this fully managed solution with expert professional upkeep, 24x7 support, and around-the-clock monitoring delivers:

Effective

Provides automated recovery and fallback

Simple

Frees your IT teams to focus on high-value projects

Lower TCO

Reduces your operating costs

Secure

Safety and protection from disaster with off-site storage

How do you know it'll actually work?

DR Testing with Atomic Data DRaaS

Successful DR requires consistent validation and testing to ensure the solution will perform when an emergency requires. Engage fast, clean simulated DR testing that doesn't detract from your ongoing DR activity or staff resources

- Test recovery coverage and capabilities in minutes
- Zero conversion needed
- Swift removal of test replicas

Protected Site

Recovery Site

Isolated Test Network

With Atomic Data DRaaS you can enjoy

Easy testing and validation

Simplified prescriptive or changeable recovery options

Lower TCO that leverages existing VMware investments

Speed and simplicity with quick onramp and no new skills requirements
