

TECH ASSESSMENT

Take the guesswork out of your IT planning. The Atomic Data Tech Assessment is a custom, comprehensive inventory and analysis of your existing technology and infrastructure that helps you form a strategic roadmap as part of your business plan and digital strategy.

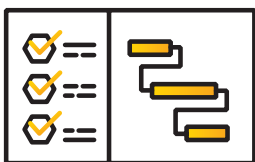

Inventory → Interviews → Analysis → Professional Assessment → Road Mapping → Recommendations

In-Depth Discovery and Professional Analysis of

- Network architecture
- Connectivity & wireless infrastructure
- Routers, switches, firewalls, etc
- Servers (cloud and on-premise)
- Workstations
- Printers, copiers, scanners
- Backup & disaster recovery solutions
- Software licensing
- User accounts
- Email and spam protection
- Applications
- Security standards

Then our executive and IT-level interviews provide realistic, 'boots-on-the-ground' perspectives about business vision, expansion plans, technology pain points, and that pesky old server in the switch closet that needs a daily reboot.

Following data collection and assessments, Atomic Data's Engineers painstakingly outline your most critical IT issues and provide industry best practice recommendations for upgrades, rightsizing, replacements, or service changes. Plus, it's all delivered in a comprehensive digital and physical document that you can leverage however you choose.

Your Customized Tech Assessment Includes

- Current & future state network diagrams
- Project & upgrade road maps
- Recommendations to meet fiscal & compliance needs
- Detailed cost summaries
- Verbose hardware reports
- Security policy assessments
- Client risk report
- Mobile device report
- Share permission report
- Detailed Exchange usage and permissions reports
