

BACKUP AS A SERVICE (BaaS)

The smart way to combat cyberthreats

With digital transformation to multi-cloud ecosystems, dispersed workforces, and sophisticated cyberattacks, safeguarding your data has never been so critical. Atomic Data's Server (BaaS) solution serves as your private cloud bucket in the sky, allowing you to store backups offsite and recover your data, irrespective of location or workload type.

Modernize your data protection with Atomic Data's BaaS solution. This robust service will protect your cloud, SaaS, virtual, and physical workloads throughout each phase of their evolving life cycle.

- Fully managed by Atomic Data
- SOC 2 Type II attested data center storage
- Highly scalable for larger environments
- Policy-driven protection
- Reduced cost & complexity
- Offsite backups to protect on-prem hardware
- Offsite backups to protect Public Cloud workloads
- Recovery & replication for critical workloads
- Encryption at rest
- AI-powered assistance tools

Enterprise-grade capabilities

No recovery goal is out of reach, with Veeam Backup & Replication and its **Instant Recovery capabilities**. These reliable restores work across any cloud infrastructure and platform.

Advanced ransomware protection for your data will bring you peace of mind. Veeam Backup & Replication routinely scans your workload for malware and layers in immutable backups for added security.

Encryption at rest adds an extra layer of security. Only authorized personnel can access sensitive data and decode it with an encryption key.

Even if threat actors gain access to your Veeam Backup & Replication console, **Insider Threat Protection** ensures you're still in the game. This feature empowers Atomic Data to maintain untouchable backups created by Veeam Backup & Replication of your physical and virtual machines configured in the Veeam Agent.
