

ENDPOINT PROTECTION

Meeting rigid compliance needs and keeping relentless threat actors at bay means that not just any endpoint protection solution will do. Stay protected with world-class endpoint protection services from Atomic Data.

Tenacious endpoint protection, supported by the experts

Fileless malware, zero-day exploits, and a cyberweapon arms race means traditional antivirus can no longer keep up. With each endpoint a potential open door to bad actors and the sheer number under management skyrocketing, an integrated and layered approach to endpoint protection is required. Keep up in the arms race, with CrowdStrike's proven Endpoint Detection & Response (EDR) and Next-Gen Antivirus solutions.

Next-Generation Antivirus (NGAV)

Next-Generation Antivirus is a cloud-based cybersecurity tool that synthesizes artificial intelligence, machine learning algorithms, and behavioral detection capabilities to detect and defend against threats, both known and unknown. With Atomic Data, NGAV offers a number of features:

- Swift implementation by security experts
- 24x7 support & management
- Behavior-based analytics
- Machine learning & artificial intelligence
- Predictive and anti-exploit capabilities
- Cloud-based architecture
- Malware prevention
- Minimal CPU overhead
- Whitelisting & blacklisting

Endpoint Detection and Response (EDR)

CrowdStrike's EDR add-on to NGAV puts your endpoints under the looking glass, preventing security threats from going undiscovered. It will **report on threat activity within your environment**, provide **historical visibility via robust reporting measures**, and **isolate contaminated endpoints** when prevention measures fail.
