

# NETWORK AS A SERVICE

## A fully-managed, subscription-based approach to modern network infrastructure.

Atomic Data's Network as a Service (NaaS) provides the hardware, support, monitoring, and maintenance your organization needs through one all-inclusive monthly service. Instead of managing network refresh cycles, break/fix costs, and day-to-day administration internally, your team gets a current, supported network environment backed by Atomic Data's engineers and 24x7 monitoring.

### Key Benefits of Network as a Service

**24x7x365  
PEACE OF MIND**

We keep a **watchful eye** on your network to step up your security posture.

**PROACTIVE MAINTENANCE &  
MANAGEMENT INCLUDED**

Our engineers keep your devices **patched & updated** so you can get back to work.

**PREDICTABLE ALL-INCLUSIVE  
MONTHLY COST**

Convert CapEx to a **monthly OpEx** while maintaining the latest security technology.

✓ Reduce training/hiring costs by tapping Atomic Data's deep bench of engineering resources.

✓ Scale networks on-demand with cloud-native architecture and rapid provisioning.

✓ Rapid hardware replacement within 24-48 hours, minimizing downtime and disruption

✓ Truly managed solution with a broader scope of services included than the other guys

✓ Reduced alert fatigue by offloading incident response to Atomic Data's NOC & SOC.

✓ Modernize legacy gear and stop worrying about hardware lifecycle management

#### Case Study: Multi-Location Healthcare Company

### From Overwhelmed to Optimized – Network as a Service in Action

A regional healthcare services provider with eight locations **struggled to maintain compliance while their small IT team was overwhelmed** with alerts. After implementing a firewall NaaS solution:

 **91% reduction in after-hours calls**

 **Audit prep time down from 3 weeks to 3 days**

 **Security incidents down 83%**

# NETWORK AS A SERVICE

Atomic Data's Network as a Service is a subscription service available in 3-year or 5-year commitments with zero upfront cost. Types of hardware available include firewalls, switches, and wireless access points.
